

H.I.D

High Intensity Discharge
Xenon Light System

Designed by a rider, for the rider!

Increase peripheral visibility up to 70% more than halogen bulbs and provide up to 3x more illuminated coverage than the stock lighting with SledStart Xenon-HID Lights!

HID Explained

4300K bulb has an approximately 3200lm output, which is more than 3x the light output of the traditional halogen light and is the color temperature with the most output - without casting shadows that make it difficult to ride your sled at night.

Benefits of SledStart HID Xenon Lights:

Saves Power: HID Xenon lights consume only 35W per bulb of electricity compared to traditional halogen bulbs, and frees up 40 watts of power on your stator.

Longer Life: HID Xenon lights last about 4,000 hours, over 8 times more than OEM halogen bulbs.

Safety: HID Xenon bulbs have an increased brightness of 300% over traditional halogen bulbs adding an extra margin of safety.

Appearance: HID Xenon lights produce comfortable light which is very close to the natural sunlight. It makes everything easier to see at night.

Slow Start with no inrush current
Extend the bulb life
by 8 times
H4 High/Low Bi-Xenon

HID Kits are easy to install, even for the most novice of mechanics. Kit is fully plug and play!

SledStart HID Kit includes:

- 2 x 4300K Bi-Xenon Bulbs
- 2 x Slim-line Super Thin Ballasts
- 1 x Custom fit Wire Harness
- 1 x Installation Guide
- Zip Ties & Installation Hardware
